

Why bugZing

Delivers an anti-mosquito cocktail of the most powerful EPA-tested Scent repellents available with no skin contact And can be combined with contact repellents that can be beneficial to your skin!

Long-Lasting

Advanced, patented membrane technology delivers continuous stable delivery for as long as 800 hours with no potency degradation.

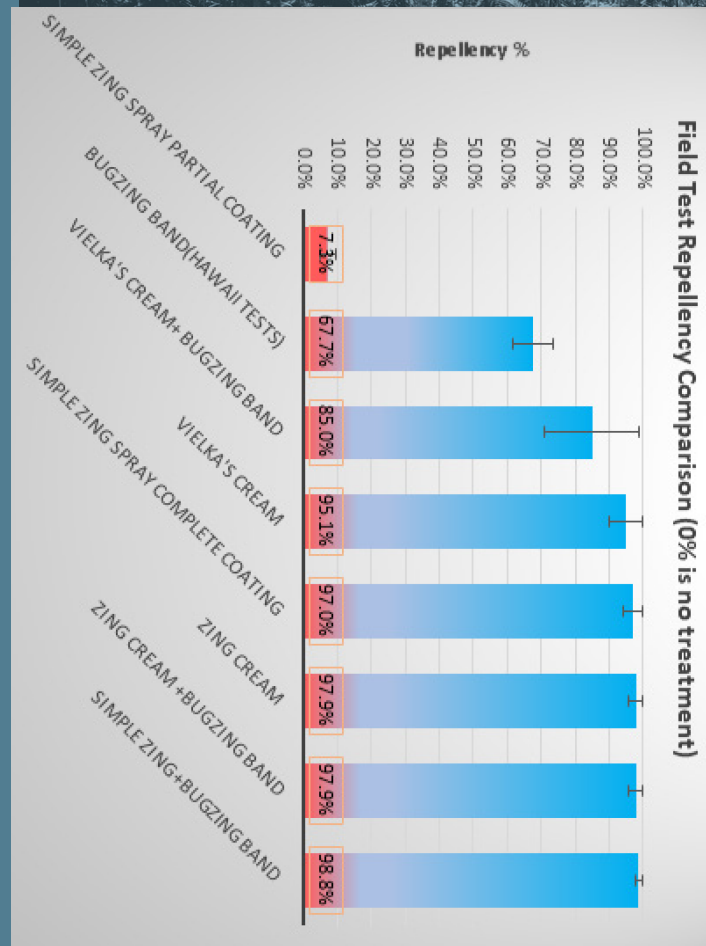

Affordable

More Cost-Effective than competitors.

Backed by Data

In Numerous field Tests, the combination of our products proved to reduce mosquito landings by 67-98.8%.

Why Us?

There is a lot of hype about mosquito repellants. Repellants that proclaim NO DEET! are very "in" because of the legitimate concern about rubbing a strong chemical on your skin.

Here is the truth: The odor of DEET is truly the most effective repellant available and has been since it was developed in 1944. With mosquito-transmitted illness spreading due to climate change and new viruses emerging, like Zika, you want weapons-grade mosquito protection; not slightly effective botanical fragrances that may or may not last more than a few hours.

We have discovered a synergistic combination of scents with DEET that are more effective than DEET alone and are able to deliver them at a steady effective rate for 800 hours in a wearable device called BugZing™. As a wearable device (spatial repellent) we are not putting the scent oils on your skin. We also discovered that the scent repellents can be synergistically combined with contact repellents that disturb the mosquito's sensitive foot contact. These skin coatings can be worn continuously, safe for all people, including people with rashes and sun burns. They also can be effective while combined with therapeutic skin lotions.

This combined defense can give the user that maximum continuous mosquito bite protection without concerns of harsh chemical contact.

WE CARE

We care about protecting those at risk of disease, and discomfort while adventuring.

- Pregnant Mothers waiting for the adventures to start.
- Babies, toddlers, kids, and those still young at heart going out for the first time or the 500th.
- Adventurers with sensitive skin, be it from underlying medical conditions or a sunburn, our products are gentle and will not rub you the wrong way.

Effective, Long-Lasting Mosquito Repellent

Our Products

Double Protection Package

The Double Protection Pack combines the silky comfort and long-range scent masking/repellency of our Basic Soft bands with the contact blocking of our Simple Zing Spray. In our field testing the pairing reduced mosquito hovering and landings **by over 99%**.

BugZing Zing Mat

This is a diffusion tube containing our repellent mixture sewn into a polyester high shag floor pad. This is expected to deliver an effective mosquito repellent vapor for 1 year before needing a refill.

Zing Cream

A mixture of IR3535 is added to an Aloe Vera cream. This cream is skin therapy cream and can heal cracked skin and soothe itching insect bites. By adding the IR3535 it can act as a mosquito contact repellent as well. Our field testing showed a greater than **98% landing reduction**.

Vielka's Cream

Vielka's cream is an aloe vera cream that with thick coating we found in our field tests shows a contact repellency of **95% reduction** of landings on exposed skin.
